1 Global overview

Definition

	Description
Staging	A process where the data is imported from external component into 'Landing Zone'
Landing Zone	Raw data from external component
Process data	A process where the data is transformed (eg. ETL tooling) into the standard data model.
Standard Zone	Standard data model (is used for all customers) from which all 'information questions' can be answered
Publish	A process where the data is publish to a specific format

2 Export StandardZone data

In Fyndoo Data Analytics a standard export is available for the 'standard zone'. Below the specifications of this export

- The export of the standard Zone contains **all** data available in the standard Zone. Every day all data is supplied in the export
- All tables in the standard zone will be exported as csv-file. With the following specifications:
 - Encoding: UTF8
 - Separator: semicolon (;)
 - Timestamps as yyyy-MM-dd HH:mm:ss
 - Dates yyyy-MM-dd
 - Numbers will be exported with a dot (##.## with out a thousand separator)
 - Strings will be enclosed with a double qoute (")
 - Booleans will be exported as 'Y' or 'N'
- The frequency will be on a daily basis (between 23:00 and 04:00)
- Every table will be in a separate csv-file
- All csv-files will be zipped in a zipfile with the following name specifications. The filename is <environment>-<whitelabel>-<versionnumber>-<date>.zip eg:
 - PRODUCTION_xyzBank_v2022.1_2022-01-29.zip
 - o ACCEPTANCE_xyzBank_v2022.1_2022-01-29.zip
- There is no automatic clean up of old zipfiles yet (this will be realized in the future)
 For now we cleanup the files by hand, when cleaning up old files, at least the files of the last 7 days will remain on the sftp server.

3 Versioning Export StandardZone data

- The aim is to do a maximum of 4 version updates per year
- When a new version is available, the old version (t-1) will remain available. We inform all customers when a new version is available and ask the customer to use this new version.
 - The old version (T-1) will be available for a maximum of 365 days, so the customer has one year to 'migrate' to a new version.
- New feature requests are only executed on the current version (NEVER on old versions!)
- Documentation of the standard zone data export version will be available online See https://fyndoo.github.io/FDA/

4 Checks and monitoring

- All data is processes in a Postgres database and all tables have a 'primary key' so the uniqueness of a record is guaranteed by Postgres
- The team will be notified of all important ETL jobs on ACCEPTANCE and PRODUCTION via a SLACK notification (error and success)
- The data-export-job will not start if a previous job results in an error, so the data-export will NOT generate any data
- In the data-export there is a table with the name 'sz_meta.csv' with meta data, eg:
 - Number of records per table (available in FDA version 2022.4 April 2022)
 - DateTime of the last synchronization with Fyndoo Lending database
- When a job is aborted or produces an error an email is sent (with the logging) to the team
- Topicus will proactively inform the customer about the error by email.
 The follow-up of this issue, will be done in the regular way (service desk) just like all other issues.

5 Service Level Agreement

 No specific SLA has been agreed for this component/product. The SLA agreements made for Fyndoo also apply to this component/product.

6 Other

- The schedules of the data-export jobs can be configured per customer and will be scheduled in consultation with the customer
 Updates of Fyndoo Lending and OS updates of our datacenter are most of the time planned between 18:00 and 22:00, so we suggest to start the data-export jobs after 22:00
- We deliver the data in a zipfile on our own SFTP server (sftp.fyndoo.com), see document 'sftp.fyndoo.com'

7 Data Export 'Standard Zone'

Below are the definitions of the tables as populated by the FDA application in Postgres. These tables are exported 1 on 1 under the conditions as defined above.

sz_agreement							
Primary key (referenceid + proces	snum	ber)					
Column Name	#	Data type	Identity	Collation	Not Null	Default	Comment
referenceid	1	varchar(128)	[NULL]	default	TRUE	[NULL]	Unique identifier of an agreement
processnumber	2	int8	[NULL]	[NULL]	TRUE	[NULL]	Unique identifier of an process
whitelabel	5	varchar(255)	[NULL]	default	TRUE	[NULL]	The whitelabel
mainborrowerreferenceid	6	varchar(128)	[NULL]	default	FALSE	[NULL]	Unique identifier of a counterparty
startdate	7	date	[NULL]	[NULL]	TRUE	[NULL]	The start date of this credit agreement
enddate	8	date	[NULL]	[NULL]	FALSE	[NULL]	The end date of the agreement
reviewdate	9	date	[NULL]	[NULL]	FALSE	[NULL]	The review date of the agreement
agreementperfect	10	bool	[NULL]	[NULL]	FALSE	[NULL]	Whether or not this credit agreement is perfect
datelastchanged	11	timestamp	[NULL]	[NULL]	FALSE	[NULL]	The date the credit agreement was last changed (and lead to a new actual version of this credit agreement)
externalreferenceid	12	varchar(128)	[NULL]	default	FALSE	[NULL]	Unique external reference identifier of an agreement
sz_annualaccounts							
Primary key (annualaccountsid)							
Column Name	#	Data type	Identity	Collation	Not Null	Default	Comment
annualaccountsid	1	varchar(128)	[NULL]	default	TRUE	[NULL]	Internal identifier of the document (eg. document of type history)
financialsid	2	varchar(128)	[NULL]	default	TRUE	[NULL]	Identifier of a group of documents (History/SLI/Prognoses) regarding the same counterparty
documenttype	3	varchar(128)	[NULL]	default	FALSE	[NULL]	Documenttype of underlying data (eg. history)
sz_annualaccountsdetails							
Primary key (annualaccountsid + c	olum	nenddate)					
Column Name	#	Data type	Identity	Collation	Not Null	Default	Comment
annualaccountsid	1	varchar(128)	[NULL]	default	TRUE	[NULL]	Internal indentifier of the document of the history application
columnenddate	2	date	[NULL]	[NULL]	TRUE	now()	End date of the column in the history application
CashAndEquivalents	3	float8	[NULL]	[NULL]	FALSE	[NULL]	[NULL]
